- The Smart Campus Event Management System is used to manage college events digitally.
- It allows students, organizers, and admins to interact on one platform.
- Organizers can create and update event details بسهولة.
- Students can view and register for events online.
- The system stores all event and user data in a database.
- Admin can approve, edit, or delete events and users.
- It reduces manual work and paperwork in colleges.
- Notifications can be sent to users about event updates.
- It provides a simple and user-friendly interface.

PROBLEM STATEMENT

1

2

3

4

5

6

7

8

9

- Managing campus events manually leads to confusion and inefficiency.
- Students often miss important event updates and registration deadlines.
- Event information is scattered across notice boards and social media.
- There is no centralized system to handle event scheduling and participation.
- Tracking registrations and attendance becomes difficult for organizers.
- Communication gaps exist between students, organizers, and administration.
- Manual processes increase paperwork and chances of errors.
- Therefore, a smart system is needed to automate and streamline event management.

OBJECTIVE(S)

1

2

3

4

5

6

7

8

9

- To develop a centralized system for managing and organizing campus events efficiently.
- To provide an easy platform for students to view and register for events with real-time updates.

PROPOSED SYSTEM

1

2

3

4

5

6

7

8

9

- The proposed system is a web-based application that automates the management of campus events.
- It provides a centralized platform for students, organizers, and administrators.
- Organizers can create, update, and manage event details بسهولة.
- Students can easily browse and register for events online.
- Admin has full control to monitor and manage users and events.
- The system stores all data securely in a database.
- It sends notifications and updates to users about upcoming events.
- Overall, the system improves efficiency, reduces manual work, and ensures better coordination.

PROPOSED SYSTEM ARCHITECTURE

TECHNOLOGIES USED

1

2

3

4

5

6

7

8

9

- **Frontend:** HTML, CSS, JavaScript (for designing user interface)
- **Backend:** Java (Spring Boot) for handling business logic and APIs
- **Database:** MySQL for storing users, events, and registrations data
- **IDE/Tools:** Eclipse or IntelliJ IDEA for development
- **Server:** Apache Tomcat or embedded Spring Boot server for deployment

MODULE DESCRIPTION

1

2

3

4

5

6

7

8

9

- **Admin Module:** Manages users and events, and has full control over approving, editing, or deleting event details.
- **Organizer Module:** Allows organizers to create and manage events and view the list of registered participants.
- **Student/User Module:** Enables students to browse available events and register for them easily.
- **Authentication Module:** Handles secure login and registration for all users in the system.

6	THANTRA	08-07-2026	ck.naidu	Register	Delete

ADVANTAGES & LIMITATIONS

1 ✓ **Advantages**

- 1.Reduces manual work and paperwork in managing campus events.
- 2.Provides a centralized platform for all event-related activities.
- 3.Makes event registration quick and easy for students.
- 4.Improves communication through notifications and updates.
- 5.Ensures better organization and tracking of events and participants.

5 ✗ **Disadvantages**

- 6.1.Requires internet connectivity to access the system.
- 7.2.Initial development and maintenance cost can be high.
- 8.3.Technical issues or server downtime may affect usability.
- 4.4.Users may need training to use the system effectively.
- 5.5.Data security risks if proper protection measures are not implemented.

Thank you
